

## THEATRES

**'Smiles Are Trumps' in Picture Showing at Utah Theatre**

Maurice Flynn, the picture star, formerly one of the nation's foot-ball heroes, will appear today in his latest Fox photoplay, "Smiles Are Trumps," at the Utah theatre. This is a railroad tale and has all the speed of a "light engine" going down a forty per cent grade, it is said. The picture was adapted from a Frank L. Packard story called "Tempered Steel."

It begins when Flynn, as Jim Carson, a young assistant paymaster, discovers that his superior officer has been padding the payroll of a section boss. The discovery incenses the paymaster and he sends his subordinate to pay off the men himself—secretly instructing the section boss to be prepared to "get" the bumptious young assistant. What happens from then on provides exciting action galore, which includes several rough-and-tumble fights, a giddy plunge from an open trestle, and a sensational race between two locomotives on parallel tracks during which Flynn makes a blood curdling leap from one speeding engine to the other.

The girl who figures in the love theme is portrayed by pretty Ora Carow.

**Alexander Appears With His Wonders Today on Pantages Bill**

The keen interest manifested in the initial appearance in Ogden of Alexander, "The Man Who Knows," famed psychic and who is recognized in the scientific world as the master psychologist, has influenced Manager Joe Goss of the Orpheum theatre to open with the Pantages road show today instead of Thursday and continue for the remainder of the week.

This is the man of mystery's first vaudeville and his success has been commensurate with that enjoyed with his own road production for several years. At the Pantages theatre in Salt Lake City this week Alexander has broken all records for that house. His production is upon a lavish scale, with stage settings, scenery and costumes running consistently oriental. The salient features of his former demonstrations in psychic phenomena have been condensed to about 50 minutes, with during which he responds to any queries written in any language and sealed as human mind may dictate.

At the Friday matinee ladies only will be admitted and at this performance Alexander promises the ladies his Sinia Science will be devoted to the answering of any and all questions asked in confidence to which they would not want men to hear. Ladies must be left at home during the Alexander engagement and not brought to the theatre, as their crying will disturb the performance. The balance of the Pantages is of excellent quality and in support of the vaudeville bill will give excellent entertainment.

**'Ten Nights in a Barroom' to Show at Alhambra Again Tomorrow**

The great attendance to see "Ten Nights in a Barroom," compels us to hold the picture an extra day. Thursday will be the last showing in Ogden. Don't miss the greatest heart-interest story ever screened. The Constance Binney production comes Friday and Saturday with the added feature "A Race For Life." Bill Hart comes Sunday in "Travelin' On."

**'First Love' With Constance Binney Comes Friday to Alhambra**

"Factory girls ought to get a great kick out of 'First Love,'" said Manager Skinner of the Alhambra theatre, in speaking of the latest Constance Binney picture, which will show at his playhouse for two days, beginning next Friday.

"For," he continued, "First Love" is a very interesting and accurate

## DAMPED WAVES WILL BE ABANDONED

BY R. L. DUNCAN.

Director, Radio Institute of America

With the rapid strides in the advancement of radio, the discontinuous or damped waves are going by the board. Transmitting stations are using direct current for their source of power and their waves go out in continuous flow.

These continuous or undamped waves are generated for the most part by vacuum tubes, although the transatlantic stations of the Radio Corporation of America employ the Alexanderson radio frequency alternator and the United States navy uses a direct current generator.

But the large broadcasting stations use the vacuum tube.

On account of the different characteristics of the two types of waves, the ordinary crystal receiver cannot receive the code signals sent out by stations employing direct current or continuous waves.

The frequency of the current, even after being rectified by the detector and passing through the head phones,

is above audibility. No sound is heard except the opening and closing of the circuit.

**CAN'T HEAR CODES.**

While one may hear radio telephony on a crystal detector set, he cannot copy continuous wave code messages on it. The broadcasted sound is sent out by radio frequency wave motion termed the carrier wave.

This is modulated at an audio frequency by the phone into which the operator speaks. Code messages sent out on a continuous wave do not enjoy the same advantage.

For the amateur desiring to listen in on all code signals as well as broadcast music and lectures, the regenerative receiving set should be used.

As the continuous or undamped waves come through the air, they are received on the regenerative circuit in for not diagram 1.

No. 2 represents the local waves generated by the vacuum tube in the regenerative set.

No. 3 shows the difference of the two applied frequencies, represented by 1 and 2.

No. 4—The rectified beat currents.

No. 5—The telephone current.

study of how working girls of moderate means live and love. Scenes were taken in a great textile factory, insuring absolutely accurate atmosphere.

There are all types in the picture, the hard-working old father and mother at home, the speeders who endanger their lives at factory machines to gain more money—and the sleek young men who are too willing to accept the adoration and loyalty of these simple girls.

"First Love," to sum it all up, is an interesting cross-section of human life as lived by the working people of our country. It is a story that will have an appeal to a great many different classes of people.

Supporting Miss Binney is an excellent cast, including Warner Baxter, George Vebis, Betty Schinde, George Hernandez, Fannie Midgley, Edward Johnson, Agnes Adams and Maxine Elliott Hicks. Sonja Leven wrote the story, which was scenarized by Percy Heath and Aubrey Stauffer. Maurice Campbell directed, with supervision by Elmer Harris.

## RADIO GAINS FRESH ADHERENTS

Every day radio's attracting fresh recruits from the ranks of the famous. Here are three of the newest ones.

The young lady is Ruth Wallace.

**PLAIN CITY TO HEAR O. H. S. PRINCIPAL**

(Special Dispatch)

PLAIN CITY, April 12.—A. M. Merrill, principal of the Ogden High school, will be the speaker at a meeting of the Plain City Parents-Teachers association Thursday evening.

Miss Leona Warner will sing and Mrs. Andrew Barnett will give a reading.

A community Arbor Day committee will be formed to prepare for beautifying of the school grounds.

Wimer J. Maw is in charge of this undertaking. Principal J. T. Wahlquist will report on the money expended for playground apparatus.

As this will be the final meeting of the season, a large attendance is anticipated. Previous meetings have been addressed by Superintendent E. S. Hinkley of the state industrial school, Scout Executive G. A. Gentes, County Superintendent of Schools B. A. Fowler, Principal Wahlquist and Scoutmaster Philo Farnsworth.

**SENATOR CROW AT POINT OF DEATH**

PITTSBURGH, Pa., April 12.—United States Senator William R. Crow, who has been ill in a hospital here for several months, was reported today as having suffered a relapse and his life was despaired of.

His brother, Dr. Crow, of Uniontown, Pa., was summoned to his bedside, and it was said that upon his arrival the attending physicians would decide whether they would resort to blood transfusion in an effort to prolong Mr. Crow's life.

Mr. Crow was appointed to the senate by Governor Sprout last October.

## HUGHES ASKING QUICK PAYMENT

Lord Curzon Writes That British Don't Question Rhine Claims

WASHINGTON, April 12.—Secretary Hughes Tuesday received from Ambassador Harvey in London a note from Lord Curzon, foreign secretary, which stated that the government of Great Britain would not in any circumstances desire to question the rights of the United States in its claims for payment of costs for the American army of occupation in Germany.

Lord Curzon's communication expressed hope that means of settlement of the American claims would be found as soon as possible.

The British government, he stated, was in communication with France for the purpose of arriving at the most convenient method of meeting the American claims.

Secretary Hughes later transmitted a note to Ambassador Harvey for delivery to the British foreign office expressing his gratification at Lord Curzon's letter and expressing hope that reimbursement for costs of the United States army in the Rhineland soon would be made.

Secretary Hughes instructed Ambassador Harvey to say in reply:

"I am directed by my government to express its gratification at the tenor of the response which your lordship has made to my communication relative to the payment of the costs of the American army of occupation on the Rhine."

"Permit me to join your lordship in the hope that it may be possible to reach a speedy and satisfactory conclusion of the matter."

Mr. Hughes has directed that similar replies be made to communications of the same character recently received from the French and Belgian governments.

## TAX PAYMENT EVERY SIX MONTHS URGED

SALT LAKE, April 12.—W. H. Folland, city attorney, in addressing the Young Men's Republican club at its regular meeting last night, urged the support of the organization in providing for payment of taxes semi-annually instead of annually.

The speaker declared that such a plan would effect a decided reduction in the taxes for state, counties, municipal and school purposes, through the saving of interest money on loans now taken by the different departments during the year in anticipation of tax collections in November.

Saving to Salt Lake alone, he said, would amount to approximately \$125,000.

**RADIO PRIMER.**

RESISTANCE.—This means the property of bodies which opposes the flow of electrical current. Just as water passes less easily through a small, long pipe, so an electric current encounters considerable resistance in passing through a wire of great length and of poor conducting quality. And the current encounters less resistance in passing through a short wire that is a good conductor.

## EXPLAIN MINERAL RIGHTS ON LANDS

SALT LAKE, April 12.—Relative to the query submitted by John T. Oldroyd, state land commissioner, involving possible mineral rights on "lieu section" lands in process of purchase from the state, Harvey H. Cluff, attorney general, yesterday expressed the following opinion:

"The application for action and purchase not constituting an actual purchase of the lands and the appli-

cant not intending in any way to acquire mineral lands by or through application, the mineral law being passed for the purpose of increasing the revenues of the state and the meaning of section being doubtful which doubtfully should be resolved in the state, it is my opinion that no reservation of minerals be made in the certificates of question."
